

### Percentages

The word **percent** means "out of 100".

All calculations involving percentages relate to 100.

You will need to find a percentage of an amount...

# *y* percent of $x = \frac{y}{100} \times x$

#### Worked example 1

Decrease 45 kg by 8%

$$\frac{8}{100} \times 45 = 3.6$$

$$45 - 3.6 = 41.4 \text{ kg}$$

#### Worked example 2

At birth the mass of a puppy is 0.8 kg. During each of the first two weeks of its life, its mass is expected to increase by 15%.

Calculate an estimate of its mass after two weeks. Give your answer to a sensible degree of accuracy.

Week 1; $\frac{15}{100} \times 0.8 = 0.12;$ total mass is 0.8 + 0.12 = 0.92Week 2; $\frac{15}{100} \times 0.92 = 0.138;$ total mass is 0.92 + 0.138 = 1.058Estimate of mass after two weeks is 1.1 kg (1 decimal place).

#### ...or express as a percentage;

y as a percentage of 
$$x = \frac{y}{x} \times 100\%$$

 Worked example 3

 As it is heated, the volume of a gas increases from 55 litres to 78 litres.

 Find the percentage increase in the volume.

 Note: this is

Note: this is the original amount  $23 \\ 55 \\ \times 100\% = 41.8\%$

## **Examination style questions**

(a) When a human is resting and breathes normally, the amount of air inhaled is 500 ml. About 21% of the air that is inhaled is oxygen.

How much oxygen is inhaled in a single breath while resting and breathing normally?

..... ml

(b) When exercising vigorously, the amount of air exhaled in a single breath is 1 800 ml. About 15% of the air that is exhaled is oxygen.

How much oxygen is exhaled in a single breath when exercising vigorously?

..... ml

7 Estimates of the population of sparrows in the UK are given in the table.

| Year       | 1995         | 2005        | 2015        |  |
|------------|--------------|-------------|-------------|--|
| Population | 13.2 million | 9.5 million | 7.6 million |  |

(a) Between 2005 and 2015 the population of sparrows fell by 20%.It is predicted that the population will fall by a further 20% from 2015 to 2025.

Find an estimate for the population of sparrows in 2025.

.....

(b) Find the percentage by which the population of sparrows fell between 1995 and 2005.

.....%

### Significant figures

Rounding numbers is intended to make them easier to work with. It is not about changing their size. If a number is rounded off, it will still be about the same size as it was before. Decimal places can be useful, but **significant figures** are generally the best way to round off a number in a scientific context.

Remember, as with decimal places, to use the '**deciding digit**' to decide whether to round the number down (if the 'deciding digit, is 4 or lower) or up (if the 'deciding digit' is 5 or higher).

To find where to round the number, start counting digits from the first non-zero digit. Once you have started counting digits, remaining zeroes are "significant", so count them. You may need to add zeroes to the end of a larger number, when you round it. Worked example 1 Round these numbers to 3 significant figures. (a) 43.69128 (b) 0.02395750742 (c) In all three cases, the rounding line is placed three digits after the first non-zero digit... - the deciding digit is 9, so round up 43.69128 - the deciding digit is 5, so round up this zero is "significant"-(a) 43.7 **(b)** 0.023957 the deciding digit is 4, so round down 0.0240(c) 51742 51700 these zeroes are needed to make the size of the number correct -Worked example 2 Round these to the number of significant figures indicated. 63.874 to 2 significant figures **(b)** 0.000 259 75 to 3 significant figures (a) 64 0.000 260  $5.6487 \times 10^5$  to 3 significant figures -238.74 to 2 significant figures **(c)** (d)\*  $5.65 \times 10^5$ -240

### Now you try

- **1** Round to the number of significant figures indicated:
- (a) 3.1415 to 2 significant figures
- (b) 0.008 562 5 to 3 significant figures
- (c) 4472 to 2 significant figures
- (d) 90 125 to 3 significant figures
- (e) 45.89 to 2 significant figures
- (f) 894 536 to 1 significant figure
- (g) 87.42 to 2 significant figures
- (h) 19.823 to 1 significant figure
- (i) 0.004 036 to 2 significant figures
- (j) 7.3954 to 3 significant figures
- **(k)**<sup>\*</sup> 2.584  $\times$  10<sup>6</sup> to 2 significant figures
- (1)\*  $1.94 \times 10^9$  to 1 significant figure
- (m)\*  $3.258 \times 10^{-5}$  to 2 significant figures
- (n)\* 7.089  $\times$  10<sup>-14</sup> to 3 significant figures

- 2 Use your calculator to calculate each of the following. Give each of your answers to the number of significant figures indicated.
- (a) 18.457 × 0.002 58 to 2 significant figures
- **(b)** 59.2 ÷ 0.006 84 to 3 significant figures
- (c)  $\sqrt{7894.56}$  to 2 significant figures
- **3** The distance between the Earth and the Sun, at different times of year, is given in the table.

| Time of year     | Distance (km) |  |
|------------------|---------------|--|
| Vernal equinox   | 149 856 347   |  |
| Summer solstice  | 152 637 021   |  |
| Autumnal equinox | 148 332 889   |  |
| Winter solstice  | 147 129 341   |  |

Eric says that, to 2 significant figures, the distance between the Earth and the Sun is always the same.

Is Eric correct?

Give working to show how you know.

## **Examination style questions**

4 I connect a resistor to a cell for 3 minutes. The current through the resistor is 3.59 A

Calculate the charge flow.

Use the equation

### charge flow = current × time

Give your answer to 2 significant figures.

..... C

An antibiotic is used to kill bacteria growing on an agar plate.The part of the agar plate in which the bacteria are killed is a circle, with diameter 8.4 mm

Use the equation

$$\mathbf{A} = \pi r^2$$

to find the area of this circle.

Give your answer to 3 significant figures.

..... mm<sup>2</sup>

6\* The pigments used to make a coloured ink are separated using chromatography. The table shows the  $R_f$  values and the distances moved by the individual pigments.

|        | Distance moved | <i>R<sub>f</sub></i> value |
|--------|----------------|----------------------------|
| Red    | 9.1 cm         | 0.38                       |
| Yellow | 4.6 cm         |                            |
| Blue   |                | 0.74                       |

Use the equation

# $R_f = \frac{\text{distance moved by the compound}}{\text{distance moved by the solvent}}$

to complete the table.

Give your answers to 2 significant figures.
